**Agenda Item 3b**

**Federal Performance Target-Setting Update – March 2026**

---

**Subject:**

Update on the federal transportation performance measures related to road safety, including an updated target-setting approach to increase alignment with the statewide safety goals set by Caltrans.

**Background:**

Over the past decade, the Federal Highway Administration (FHWA) and the Federal Transit Administration (FTA) established a Transportation Performance Management program to orient transportation investment decision-making around national transportation goals, while also moving toward a performance-based planning and programming paradigm. Through this program, State Departments of Transportation (DOTs), Metropolitan Planning Organizations (MPOs), and transit agencies are responsible for setting targets for 28 performance measures covering the following federal goal areas: Safety; Infrastructure Condition; System Reliability; Freight Movement and Economic Vitality; Congestion Reduction; and Environmental Sustainability (status shown in Attachment A). Under MTC Resolution No. 4295 adopted in June 2017, the Planning Committee delegated authority for target-setting to staff, requiring regular consultation with stakeholders through MTC's working groups and semiannual updates to the committee going forward. This memorandum summarizes MTC's target-setting actions for Road Safety, while presenting the methodology and rationale used to arrive at the targets.

**Target Setting Approach**

MTC's approach to setting targets for federally mandated performance measures has been to support targets set by the state if state targets align with regional priorities and there is no regulatory requirement for MPOs to establish regional targets. In this cycle, MTC has elected to support the 2026 Caltrans Statewide Safety Performance Management Targets. These targets are consistent with the California Highway Safety Plan and are based on a 3.69% annual decrease in serious injuries and 2.84% annual decrease in fatalities.

In previous target-setting cycles for Road Safety, MTC established regional targets based on achieving zero fatalities by 2030. While MTC continues to hold a long-standing commitment to eliminating roadway deaths as a guiding principle, the approach to measuring annual progress is being updated. Zero fatalities is retained as an aspirational goal, with the annual targets serving as near-term tactical milestones toward continuous improvement. Supporting state targets allows MTC to stay aligned with statewide strategies while emphasizing steady, measurable gains in safety outcomes.

**Next Steps:**

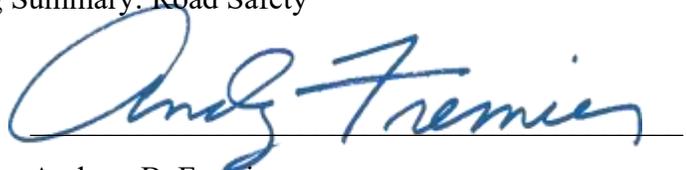

In the first half of 2026, MTC will undertake the next round of target-setting for Transit Safety and State of Good Repair for Transit Assets. MTC will also continue to monitor regional performance for all federal performance measures and the federal surface transportation reauthorization process, which could have updates for federal performance-based planning requirements.

**Issues:**

None identified.

**Attachments:**

- Attachment A: List of Federally Required Performance Measures
- Attachment B: 2026 Target-Setting Summary: Road Safety

2026 Target-Setting Summary: Road Safety

Summary

<b>Goal</b>	Road Safety
<b>Performance Measure(s)</b>	<ul style="list-style-type: none"> <li>• Number of fatalities</li> <li>• Rate of fatalities per 100 million vehicle miles traveled</li> <li>• Number of serious injuries</li> <li>• Rate of serious injuries per 100 million vehicle miles traveled</li> <li>• Number of non-motorized fatalities and non-motorized serious injuries</li> </ul>
<b>Target(s) for Year</b>	2026
<b>Target(s) Deadline for MTC Decision</b>	February 27, 2025
<b>MTC Target Setting Approach</b>	Support the 2026 Caltrans Statewide Safety Performance Management Targets.

Overview

The HSIP Final Rules from the Federal Highway Administration (FHWA) established five performance measures to assess performance for Safety. The rule contains requirements for State Departments of Transportation (DOTs) and metropolitan planning organizations (MPOs). The major requirements of the rule related to Road Safety are:

- 1) **Safety Targets** – The final rule established five performance measures to assess progress towards the Road Safety goal, defined as such:

Measure	Definition
Number of fatalities	The total number of persons suffering fatal injuries in a motor vehicle crash during a calendar year.
Rate of fatalities per 100 million vehicle miles traveled	The ratio of the total number of fatalities to the number of VMT (expressed in 100 million VMT).

Measure	Definition
Number of serious injuries	The total number of persons suffering at least one serious injury in a motor vehicle crash during a calendar year.
Rate of serious injuries per 100 million vehicle miles traveled	The ratio of the total number of serious injuries to the number of VMT (expressed in 100 million VMT).
Number of non-motorized fatalities and non-motorized serious injuries	The total number of fatalities with the Fatality Analysis Reporting System (FARS) person attribute codes: (5) Pedestrian, (6) Bicyclist, (7) Other Cyclist, (8) Person on Personal Conveyances and the total number of serious injuries where the injured person is, or equivalent to, a pedestrian (2.2.36) or a pedalcyclist (2.2.39) as defined in the American National Standards Institute (ANSI) D16.1-2007.

State DOTs must set numerical targets, and MPOs must support State targets or set numerical regional targets annually for each of the five safety targets to comply with the regulation.

- 2) **Reporting** – State DOTs must submit a report at the start of each performance period summarizing baseline conditions and targets. Additionally, State DOTs must submit progress reports at the midpoint and end of the performance period. MPOs and State DOTs must agree on the reporting process as part of their Metropolitan Planning Agreements, though federal regulation does not require separate reports to be submitted to FHWA.
- 3) **Evaluation** – A State DOT is said to have made “significant progress” if it meets four out of five safety performance targets or if performance is better than baseline data for four out of five safety performance measures. FHWA will assess an MPO’s progress as part of ongoing transportation planning process reviews. If an MPO does not meet or achieve its targets, the MPO is encouraged to develop a statement that describes how the MPO will work with the State and other partners to meet targets during the next performance period.

MPOs are required to establish their 2026 targets for safety by February 27, 2026, 180 days after the state DOT sets its targets. Per federal guidelines, target performance is reported as 5-year rolling averages, meaning the targets for 2026 represents the rolling average of the five years 2022 through 2026.

**Target-Setting Approach**

MTC has elected to support the 2026 Caltrans Statewide Safety Performance Management Targets (SPMTs). The 2026 Caltrans Statewide SPMTs are shown in the table below.

<b>2026 Caltrans Statewide Road Safety Performance Management Targets</b>			
<b>#</b>	<b>Measure</b>	<b>FY 2026 Target (5-year Average)</b>	<b>Average Annual Reduction</b>
1	Number of Fatalities	3,933.20	2.84%
2	Fatality Rate (per 100M VMT)	1.2	4.61%
3	Number of Serious Injuries	16,016.90	3.69%
4	Serious Injury Rate (per 100M VMT)	5.205	3.69%
5	Number of Non-Motorized Fatalities and Serious Injuries	4,402.50	2.84% (F) 3.69% (SI)

The Caltrans 2026 target setting methodology is based on the California Highway Safety Plan. Targets for Number of Fatalities, Fatality Rate, and Number of Serious Injuries (i.e. #1 through #3 in the table above) are taken directly from the California Highway Safety Plan. The targets for Serious Injury Rate and Number of Non-Motorized Fatalities and Serious Injuries (i.e. #4 and #5 in the table above) are calculated based on assumptions from the California Highway Safety Plan, namely a 3.69% annual decrease in serious injuries and 2.84% annual decrease in fatalities. Caltrans uses data from the Fatality Analysis Reporting System (FARS) for fatalities, Statewide Integrated Traffic Records System (SWITRS) for injuries, and Highway Performance Monitoring System (HPMS) from California Public Road Data for traffic volume. Applying the Caltrans target setting methodology for the Bay Area region yields the following targets:

2026 MTC Road Safety Performance Management Targets			
#	Measure	FY 2026 Target (5-year Average)	Average Annual Reduction
1	Number of Fatalities	468.2	2.84%
2	Fatality Rate (per 100M VMT)	0.826	4.61%
3	Number of Serious Injuries	2,326.0	3.69%
4	Serious Injury Rate (per 100M VMT)	4.33	3.69%
5	Number of Non-Motorized Fatalities and Serious Injuries	751.6	2.84% (F) 3.69% (SI)

As of early 2026, the most recent officially reported crash fatality and injury data available is from 2023. This provides a complete dataset for evaluating progress toward the safety targets established in that year. As shown in the table below, the Bay Area region did not meet its 2023 safety targets. It is also important to note that the 2023 targets were developed using a methodology aimed at achieving zero fatalities by 2030. Beginning in 2026, MTC transitioned to supporting the state’s safety targets instead.

Past Targets & Past Performance				
#	Measure	Target (2019-2023)	Actual (2019-2023)	Target Achieved?
1	Number of Fatalities	416.0	487.8	No
2	Fatality Rate (per 100M VMT)	0.753	0.877	No
3	Number of Serious Injuries	2,047.2	2,548.2	No
4	Serious Injury Rate (per 100M VMT)	3.678	4.565	No
5	Number of Non-Motorized Fatalities and Serious Injuries	689.4	850.8	No
