

Advancing Nature-based Shoreline Solutions

Caitlin Sweeney, Director, SF Estuary Partnership
Heidi Nutters, Senior Program Manager, SF Estuary Partnership

What do we mean by nature-based solutions?

"Nature-based Solutions leverage nature and the power of healthy ecosystems to protect people, optimize infrastructure and safeguard a stable and biodiverse future" - International Union for the Conservation of Nature and Natural Resources (IUCN)

Why Nature-based Solutions?

- Increasing urgency to advance projects using innovative approaches that support multiple benefits – people, nature, communities
- Regional Guidance
 - Plan Bay Area 2050, Bay Adapt Joint Platform, Estuary Blueprint
- State and Federal Guidance
 - Executive Orders

Types of Shoreline NBS

- Natural habitats such as tidal marshes, tidal flats, sandy beaches, eelgrass and oyster beds
- Hybrid approaches such as "living" seawalls
- Horizontal levees

CONVENTIONAL LEVEES & SEA WALLS

HORIZONTAL LEVEE SOLUTION

Ecosystem Services

- Provide habitat for native species
- Climate change adaptation
- Improve water quality

Reimagining Wastewater as a Resource

Reimagining Wetlands for People and Nature

SFEP's Work on NBS

Regional Scale

- Technology transfer & convenings
- Address barriers to implementation – funding, regulatory, governance

Local Scale

- Advance on the ground projects in partnership with local jurisdictions and communities

We partner with communities around the region

Oro Loma Horizontal Levee

- Pilot project built in 2015 to study water quality improvement opportunities
- Partnership between UC Berkeley, Valley Water, Oro Loma Sanitary District, SF Estuary Institute, Save The Bay, East Bay Dischargers Authority, SFEP
- Findings show significant removal of nutrients and contaminants of emerging concern

North Richmond Living Levee

- Provide public access, habitat, and stormwater treatment
- Protect vulnerable communities and valuable infrastructure from sea level rise
- Community-driven design process led by The Watershed Project, West County Wastewater District, Mithun

Fairfield Suisun Sewer District Climate Resiliency Project

- Develop freshwater wetlands, providing both wildlife habitat and nutrient removal benefits.
- Increase public access, educational and recreation opportunities in an area with few public parks.
- Reduce nutrients to San Francisco Bay, decreasing risks of harmful algal blooms.
- Conceptual design development stage: 2023-2027

Key Implementation Challenges

- PACE AND SCALE
- REGULATORY
- GOVERNANCE
- KEEPING COMMUNITIES AT THE CENTER

Thank you!
